Office Action Summary

Application No.

09/376,173

Applicant(s)

TAYLOR ET AL.

Examiner

Li B. Zhen

Art Unit

2126

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 09 February 2004.
2a) ☒ This action is FINAL. 2b) ☐ This action is non-final.
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-17 and 22-26 is/are pending in the application.
4a) Of the above claim(s) _____ is/are withdrawn from consideration.
5) ☐ Claim(s) _____ is/are allowed.
6) ☒ Claim(s) 1-17 and 22-26 is/are rejected.
7) ☐ Claim(s) _____ is/are objected to.
8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____.
4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____.
5) ☐ Notice of Informal Patent Application (PTO-152)
6) ☐ Other: _____.

DETAILED ACTION

1. Claims 1 – 17 and 22 – 26 are pending in the application. Claims 18 – 21 and 27 are cancelled.

Response to Arguments

2. Applicant's arguments with respect to claims 1 – 17 and 22 – 26 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. **Claims 1 – 17 and 22 – 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,734,903 to Saulpaugh in view of U.S. Patent No. 6,192,419 to Aditham.**

5. The Saulpaugh reference has been cited in the previous office action.
6. As to claims 22 and 25, Saulpaugh teaches the invention substantially as claimed including a computer system having a plurality of interconnected processors [intracomputer communication...message-based client-server communication; col. 1,

lines 10 – 20], providing asynchronous communication services between a client application and a first target application [col. 11, lines 7 – 40], the message passing method comprising:

receiving a request from the client application for sending an asynchronous message to the first target application [asynchronous send message request; col. 12, lines 49 – 65];

sending the asynchronous message to the first target application [delivering the send message control block to the target message object; col. 3, lines 15 – 26; col. 12, lines 49 – 66];

receiving a confirmation from the first target application and notifying the client application using an asynchronous signaling mechanism [each type of asynchronous send message request additionally specifies...event notification information that indicates how the message transaction unit 44 is to notify the client task 32 when the message transaction is complete; col. 11, lines 40 – 52].

7. Although Saulpaugh teaches the invention substantially as claimed, Saulpaugh does not specifically teach opening a session over an existing communication link between the client application and any of a plurality of target applications that have a open message passing session on the communication link.

However, Aditham teaches a collaboration application framework that allows applications to communication with each other through a session object [col. 2, lines 20 – 55; col. 4, lines 52 – 67], opening a session over an existing communication link [agent is responsible for locating a session and establishing a connection to it; col. 6,

lines 43 – 56 and col. 4, lines 1 – 8] between the client application [session 18 is considered to be public when it can be accessed by any user of the collaboration manager 10; col. 5, lines 25 – 54] and any of a plurality of target applications that have a open message passing session on the communication link [all messages posted to the session object 18 by any other programs and having the message type identified with the registered interest will be sent to the registering program; col. 5, lines 1 – 25].

8. It would have been obvious to a person of ordinarily skilled in the art at the time of the invention to apply the teaching of opening a session over an existing communication link between the client application and any of a plurality of target applications that have a open message passing session as taught by Aditham to the invention of Saulpaugh because this prevents direct transmission between programs [col. 4, line 67 – col. 5, line 2 of Aditham]. In addition this allows converters to be located at the collaboration manager site so that the programs neither include, nor require, preconfigured converters such that new programs may easily and inexpensively be added to the system [col. 2, lines 27 – 30 of Aditham].

9. As to claim 23, Saulpaugh as modified teaches a "callback" routine [event notification information that indicates how the message transaction unit 44 is to notify the client task 32 when the message transaction is complete; col. 11, lines 40 – 52 of Saulpaugh] provided to the message passing service by the client application [each type of asynchronous send message request additionally specifies...event notification

information that indicates how the message transaction unit 44 is to notify the client task 32 when the message transaction is complete; col. 11, lines 40 – 52 of Saulpaugh].

10. As to claim 24, Saulpaugh teaches the asynchronous signaling logic invoking the "callback" routine [message transaction unit 44 is to notify the client task 32 when the message transaction is complete; col. 11, lines 40 – 52 of Saulpaugh] when an asynchronous event is available for the client application [each type of asynchronous send message request additionally specifies...event notification information that indicates how the message transaction unit 44 is to notify the client task 32 when the message transaction is complete; col. 11, lines 40 – 52 of Saulpaugh].

11. As to claims 26, Saulpaugh as modified teaches notifying the client application using the asynchronous signaling mechanism [message transaction unit 44 is to notify the client task 32 when the message transaction is complete; col. 11, lines 40 – 52 of Saulpaugh] and closing the session [join/quit module for enabling programs to join and quit a session; col. 10, lines 40 – 50 of Aditham].

12. As to claim 1, Saulpaugh as modified teaches a device [system 10, Fig. 1; col. 4, lines 20 – 40 of Saulpaugh] comprising a message passing service [object oriented message filtering unit 40, Fig. 1; col. 4, lines 20 – 40 of Saulpaugh] for communication services between a client application [client task] and at least one target [server task] application [object oriented message filtering unit 40 facilitates the transfer of a

message from a client task 32 to one or more server tasks 34, Fig. 1; col. 4, lines 46 – 60 of Saulpaugh], comprising:

application blocking logic to block the client application for supporting synchronous communication services for the client application [in response to either type of synchronous send message request, the message transaction unit 44 blocks the sending client task 32; col. 11, lines 7 – 40 of Saulpaugh] and logic to unblock the client application [message transaction unit blocks the sending client task until the message transaction has completed, col. 11, lines 15 – 20 of Saulpaugh; Examiner notes that Saulpaugh teaches blocking the sending client task until the message transaction has completed, which clearly suggest the sending client is eventually unblocked] and sending a reply to the client application [message transaction unit 44 issues a final reply to the client task 32 that originally sent the message; col. 16, line 60 – col. 17, line 5 of Saulpaugh];

asynchronous signaling logic [message transaction unit] to notify the client application of asynchronous events for supporting asynchronous communication services for the client application [each type of asynchronous send message request additionally specifies...event notification information that indicates how the message transaction unit 44 is to notify the client task 32 when the message transaction is complete; col. 11, lines 40 – 52 of Saulpaugh]; and

session control logic operably coupled to open a message passing session over a conduit [agent is responsible for locating a session and establishing a connection to it; col. 6, lines 43 – 56 and col. 4, lines 1 – 8 of Aditham] to allow communications with any

of a plurality of target applications [session 18 is considered to be public when it can be accessed by any user of the collaboration manager 10; col. 5, lines 25 – 54 of Aditham] that have an open message passing session on the conduit [all messages posted to the session object 18 by any other programs and having the message type identified with the registered interest will be sent to the registering program; col. 5, lines 1 – 25 of Aditham] and operably coupled to close the message passing service session [join/quit module for enabling programs to join and quit a session; col. 10, lines 40 – 50 of Aditham].

13. As to claim 2, Saulpaugh as modified teaches providing synchronous communication services for the client application [in response to either type of synchronous send message request, the message transaction unit 44 blocks the sending client task 32; col. 11, lines 7 – 40 of Saulpaugh] over the message passing session [session 18 is considered to be public when it can be accessed by any user of the collaboration manager 10; col. 5, lines 25 – 54 of Aditham] using the application blocking logic [message transaction unit 44 blocks the sending client task 32; col. 11, lines 7 – 40 of Saulpaugh], and providing asynchronous communication services for the client application over the message passing session [session 18 is considered to be public when it can be accessed by any user of the collaboration manager 10; col. 5, lines 25 – 54 of Aditham] using the asynchronous signaling logic [each type of asynchronous send message request additionally specifies...event notification

information that indicates how the message transaction unit 44 is to notify the client task 32 when the message transaction is complete; col. 11, lines 40 – 52 of Saulpaugh].

14. As to claim 3, Saulpaugh as modified teaches synchronous message sending logic to block the client application upon sending a synchronous message to the target application [in response to either type of synchronous send message request, the message transaction unit 44 blocks the sending client task 32; col. 11, lines 7 – 40 of Saulpaugh], and unblock the client application upon receiving a confirmation from the target application over the message passing service session [message transaction unit blocks the sending client task until the message transaction has completed, col. 11, lines 15 – 20 of Saulpaugh; message transaction unit 44 issues a final reply to the client task 32 that originally sent the message; col. 16, line 60 – col. 17, line 5 of Saulpaugh].

15. As to claim 4, Saulpaugh as modified teaches synchronous message receiving logic to block the client application using the application blocking logic [in response to either type of synchronous send message request, the message transaction unit 44 blocks the sending client task 32; col. 11, lines 7 – 40 of Saulpaugh] if a synchronous message is unavailable for the client application [blocks the sending client task until the message transaction has completed; col. 11, lines 15 – 20 of Saulpaugh].

16. As to claim 5, Saulpaugh as modified teaches synchronous message receiving logic unblocks [see the rejection to claim 1] the client application upon receiving a

synchronous message for the client application [message transaction unit 44 issues a final reply to the client task 32 that originally sent the message; col. 16, line 60 – col. 17, line 5 of Saulpaugh].

17. As to claim 6, Saulpaugh as modified teaches asynchronous message sending logic to send an asynchronous message to the target application [client tasks can send messages synchronously or asynchronously; col. 8, lines 65 – 67; col. 12, lines 49 – 65 of Saulpaugh] and notify the client application via the asynchronous signaling logic upon receiving a confirmation from the target application over the message passing service session [each type of asynchronous send message request additionally specifies...event notification information that indicates how the message transaction unit 44 is to notify the client task 32 when the message transaction is complete; col. 11, lines 40 – 52 of Saulpaugh].

18. As to claims 7 and 8, these claims are rejected for the same reasons as claims 23 and 24 above.

19. As to claim 9, Saulpaugh as modified teaches the device is a storage processor for operation in a storage unit [system 10 comprises a processing unit 12...a predetermined amount of memory 18; col. 4, lines 20 – 30 and 40 – 46 of Saulpaugh].

20. As to claims 10 – 17, these are product claims that correspond to apparatus claims 1 – 8; note the rejections to claims 1 – 8 above, which also meet these product claims.

Conclusion

21. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

22. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Li B. Zhen whose telephone number is (703) 305-3406. The examiner can normally be reached on Mon - Fri, 8:30am - 5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Meng-Ai An can be reached on (703) 305-9678. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
